# Senior Mathematics Worksheets

The Mighty Minds team has designed a series of mathematics worksheets to enhance your students' understanding of their Senior content. The worksheets aim to target a range of content from different Senior subjects, including:

- **Mathematical Methods**
- **General Mathematics**
- **Essential Mathematics**

## INCLUDED FEATURES:

**1.** Each worksheet contains twenty questions.

**2.** The worksheets have been carefully mapped against all testing criteria within each unit.

**3.** The difficulty of questions ranges from straight-forward to complex so as to ensure students are building a solid foundation of knowledge across each unit.

**4.** The questions are multiple-choice style, and all include an option reading "I am unsure of the answer" to avoid false-positive responses. This system is designed to encourage students to develop a response and then check against a series of possible answers.

**5.** Students and teachers complete activities from the screen. Access to these worksheets can be at school and/or at home. Students/teachers can choose to do the worksheets consecutively or individually select a particular worksheet based on knowledge requirements. Flexibility is key. A Model response for each item is provided after the student selects what they believe to be the correct response.

At Mighty Minds, we are more than happy to create more opportunities to support your students' learning. Please contact us for more information.

Access to these worksheets costs \$7.95 plus GST per student per year.
